

Georgia: Recommendations to Strengthen Implementation of the Science of Reading

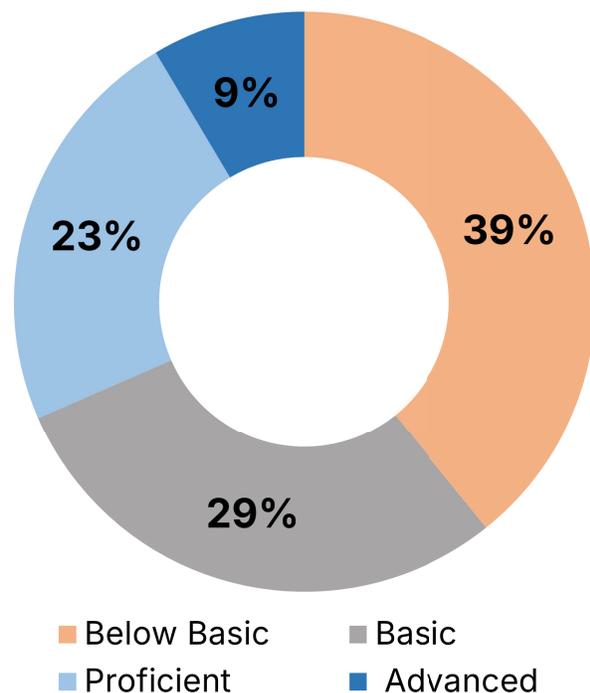

Literacy is critical for success in school, work, and civic engagement. Elementary teacher effectiveness is critical to improving students' ability to read. Research suggests that with effective reading instruction, more than 90% of students would learn to read¹—meaning that nearly *1 million additional students* would enter fourth grade as skilled readers each year.

State education leaders across the country are rightly prioritizing efforts to improve elementary student reading outcomes. However, only when state leaders implement a literacy strategy that includes *teacher effectiveness* will states achieve a teacher workforce that can strengthen student literacy year after year.

The stakes for students in Georgia

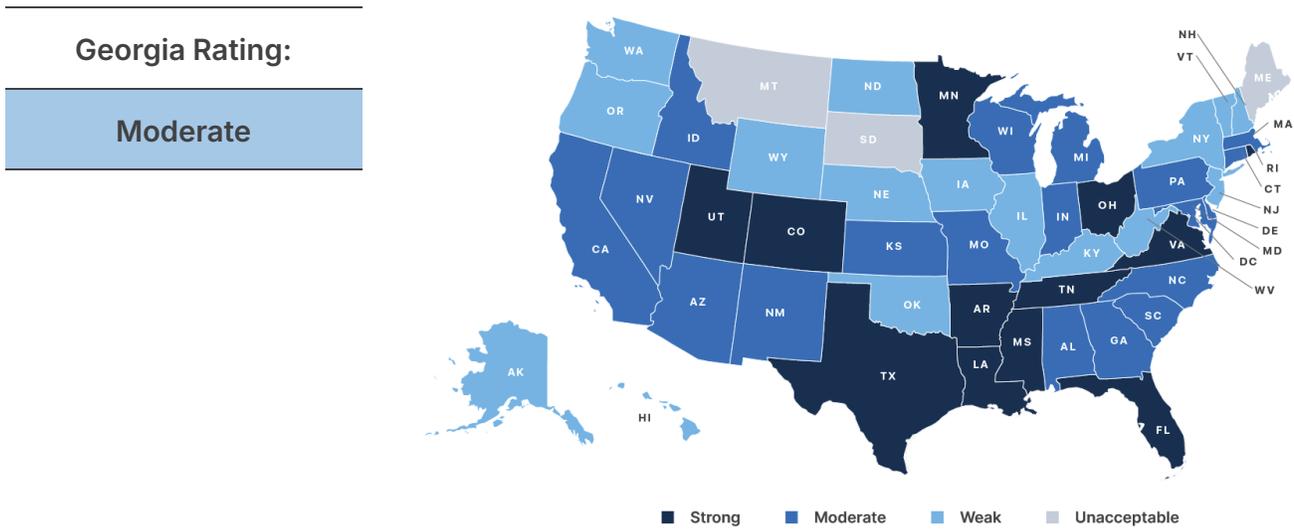

In Georgia, **only 61% of fourth grade students can read at a basic level** based on the most recent National Assessment of Education Progress (NAEP). That number falls precipitously for Georgia's historically underserved students. Students who are not reading at grade level by the time they reach fourth grade are four times more likely to drop out of high school, which in turn leads to additional challenges for them as adults: lower lifetime earnings,² higher rates of unemployment,³ and a higher likelihood of entering the criminal justice system.⁴ These alarming statistics can be largely attributed to inequities in access to effective reading instruction—a **problem that strong state policy and bold state leaders can solve.**

Fourth grade students' reading levels

Georgia's performance on state policies to strengthen implementation of the Science of Reading

NCTQ's *State of the States: Five Policy Actions to Strengthen Implementation of the Science of Reading* report provides a framework of steps state policymakers should take to ensure their teacher workforce can implement the science of reading and sustain it over time. States fall into one of four categories based on the extent to which they have implemented five policy actions. **Georgia earned a moderate rating, meaning the state has some policies in place across the five actions, but there is more to do.**

Policy actions are weighted equally. The chart below shows how Georgia performs across the five policy actions.

How is Georgia performing on the five state policy actions?

Georgia ranks **slightly above** the national average.

1	Sets specific, detailed reading standards for teacher prep programs	Strong
2	Reviews teacher prep programs to ensure they teach the science of reading	Strong
3	Adopts a strong reading licensure test	Moderate
4	Requires districts to select high-quality reading curriculum	Weak
5	Provides professional learning for teachers and ongoing support to sustain the implementation of the science of reading	Moderate

How does Georgia perform on each of the indicators?

NCTQ identified 18 key indicators within the five policy actions and analyzed the extent to which states are implementing them. The indicators represent policies and practices states should employ to support the implementation of the science of reading across the five policy actions. See below for Georgia’s performance on all indicators.

✓ Yes ○ Partially ✗ No

1. Teacher prep standards	Does state law or regulation include specific, detailed standards for all five core reading components for elementary teacher prep programs?	✓
	Does the state include how to teach reading to English Learners within the reading standards for teacher prep programs?	✗
	Does the state incorporate how to teach struggling readers, including those with dyslexia, in the reading standards for teacher prep programs?	✓
2. Teacher prep program approval	Does the state maintain full authority over prep program approval?	✓
	Does the state review the syllabi for reading courses to determine the integration of all reading standards and the science of reading as part of the program renewal process?	✓
	Does the state include reading specialists/experts in the review of reading instruction in elementary teacher preparation programs as part of the program renewal process?	✗
	Does the state include licensure pass rate data as part of the program renewal process?	✓
3. Elementary reading licensure test	Does the state use at least an acceptable reading licensure test for elementary teacher candidates?	✗
	Does the state require all elementary teacher candidates to pass a reading licensure test?	✓
	Does the state publish any pass rate data on reading licensure tests?	✓

✓ Yes ○ Partially ✗ No

4. High-quality curriculum	Does the state require districts to select reading core curricula materials from an identified list?	○
	Does the state provide guidance and/or evaluation tools to districts to aid in the selection of high-quality supplemental materials for interventions, struggling readers?	✗
	Does the state provide guidance and/or evaluation tools to districts to aid in the selection of high-quality supplemental materials for English Learners?	✗
	Does the state have a policy that requires districts to publish curriculum they are using?	✓
	Does the state publish district-level information about the curriculum used in each district on the state's website?	✗
	Does the state allocate funds toward reading curriculum materials?	✗
5. Professional Learning	State requires training for all elementary teachers in scientifically-based reading instruction.	✓
	State allocation for training in scientifically based reading instruction for inservice teachers.	✗

Recommendations for Georgia

Teacher prep standards:

- Revise teacher prep reading standards to include the knowledge and skills teachers need to support English Learners in learning how to read.

Program approval:

- Require literacy experts on site visits during program renewal processes to gauge implementation of the science of reading.

Licensure Test:

- Revise the current test or select a new test that at least adequately covers all five core components of the science of reading.

High-Quality Reading Curricula:

- Create a list of high-quality reading curricula that is aligned with the science of reading, and require districts to select from the list.
- Develop resources or tools to help districts select reading curricula that include support for struggling readers, including students with dyslexia.
- Develop resources or tools to help districts select reading curricula that include support for English Learners.
- Allocate funds to help districts make the transition to high-quality reading curricula, requiring it to be aligned with the science of reading.
- Require the state to collect and publish the reading curricula districts are using to ensure all students have access to high-quality reading curricula.

Professional Learning:

- Provide funds so that all teachers can access high-quality professional learning and ongoing support, such as literacy coaches, to sustain implementation.

Getting Started

Teacher Preparation Program Performance: Of the **23 prep programs** NCTQ reviewed in Georgia, **only 35%** of programs adequately cover all five components of the science of reading. See more details on how well Georgia’s teacher preparation programs cover the science of reading in the [Teacher Prep Review Reading Profiles for Georgia](#).

State Reading Policy Action Guide: NCTQ developed the [State Reading Policy Action Guide](#) that outlines five key actions states can take to strengthen implementation of the science of reading, including case studies that illustrate how states have done this work.
